

ACNE CONTROL

OZONE DRY SPOT DAY

TRATTAMENTO LOCALIZZATO SPECIFICO ACNE

con Neozone 4000, Estratto di cannella, Vitamina PP

LOCALIZED TREATMENT SPECIFIC FOR ACNE

with Neozone 4000, Cinnamon extract, Vitamin PP

An “invisible”, delicate daily treatment, specific to promote the resolution of the pimple and to attenuate the reddened area that surrounds it. Its formula incorporates a series of active ingredients aimed at guaranteeing an effective synergy.

Thanks to Chlorhexidine and a mix of Glycine, Sarcosine and Cinnamon extract, it performs an antimicrobial and antibacterial action, perfected by the sanitizing and stimulating properties of the Neozone 4000 Ozonized Oil, and the renewing and smoothing properties of Salicylic Acid. At the same time the presence of Vitamin PP helps prevent the onset of post-acne blemishes.

Used in combination with Ozone Dry Spot Night, it guarantees 24-hour treatment of acne lesions.

* The clinical trials conducted on a group of 20 people with acne prone skin vouch for a decrease in 24 hours of skin imperfections visibility (35% of volunteers) and redness visibility (70%). The mattifying effect was found in 90% of the subjects 24 hours after product application.

THE ACTIVE INGREDIENT

MIX OF GLYCINE, SARCOSINE AND CINNAMON EXTRACT

Specifically for the treatment of oily and acne-prone skin, it is a skin-protecting and purifying mix. It normalizes sebaceous production, acts as an astringent and helps regulate the bacterial flora, preventing acne and blackheads. In this way, it allows addressing the problems of this skin type, guaranteeing visible results in a few weeks of treatment.

CHLOREXIDINE DIGLUCONATE

Chlorhexidine digluconate is an antiseptic and antibacterial agent with a broad spectrum of action. Its bactericidal function is due to the ability to alter the protein structure of bacteria; the bacteriostatic one is guaranteed by the ability of Chlorhexidine to block the replication of bacteria and neutralize them.

SALICYLIC ACID

It is a beta-hydroxy acid derived from the enzymatic hydrolysis of salicin (extracted from Willow), characterized by marked keratolytic, smoothing properties. Its action consists in selectively breaking the keratin protein chain, which is abundantly present in the corneocytes, thus decreasing the force of cohesion that keeps these cells linked to each other. In this way it promotes the cell turnover which is essential for the treatment of acne-prone skin. It also boasts proven bacteriostatic, soothing properties.

NEOZONE 4000

The Neozone 4000 Ozonized Oil remarkably intervenes on acne scars thanks to its special dermatological properties: it purifies the skin tissue and helps reduce redness, ensuring the correct energy supply to the skin to regain balance and comfort. It also boasts undisputed repairing properties, which make it an essential ingredient in order to improve hydration and therefore the skin repair capacity.

VITAMIN PP

It performs a revitalizing, anti-radical action. In addition, it improves skin smoothness, increases the thickness of the skin layer and helps the skin in its function of protecting against environmental stressors (barrier effect). Regular use on acneic skin has shown a powerful anti-inflammatory, restorative activity with an improvement and healing of blemishes in a short time as well as less evident scars.

THE PRODUCT

Specific emulsion for the localized treatment of acne lesions and related redness and swelling.

INDICATIONS

Product for external use, for the treatment of acne scars.

HOW TO USE

After thorough cleansing, apply the product directly to the area to be treated and allow it to absorb by dabbing lightly.

WARNINGS

Apply on intact skin. Avoid contact with eyes and lips.
Wash your hands after applying the product.

Packaging
15ml PE tube. In a box.
